

CrowPanel Quick Update Guide

If something does not work as expected

If the panel does not work, or does not work as expected, first check for firmware updates. Before updating, make sure the panel is connected to Wi-Fi.

Step 1

Open Settings

On the main screen, tap the Settings icon.

Step 2

Go to System and check for updates

In Settings, select System. Then, in the Firmware update section, tap Check.

Important: the panel must be connected to Wi-Fi before checking for updates.

Install the update

Step 3

Install the update

If an update is available, a confirmation window will appear. Tap Update.

Step 4

Wait until the update finishes

Wait for the firmware to download and install. Do not turn off or disconnect the panel during the update. The panel will restart automatically.

Verify the installed version

Step 5

Check the version

After the panel restarts, open Settings → System again and check the version shown in the Firmware update section. Confirm that the version has been updated successfully.
