Product info

CrowPi2 combines Raspberry Pi and a range of common sensors, it’s just as useful for learning about STEM education and setting up as a portable laptop. No matter you are Raspberry Pi fan, a STEM educator, or someone who wants to experience something interesting, CrowPi2 will be your best choice!

Main features

1. 11.6-inch **1920*1080** IPS screen
2. Sleek body made out of **environmentally-friendly** material, portable for **on-the-go** use
3. **Wireless keyboard** detaches from body or stays connected via magnet
4. Convert between playing and learning in second
5. Get started via **one-step installation** of **Raspberry Pi 4B**
6. **2-MP camera, microphone, and stereo output** built in
7. Switch between projects using one button and get creative using Raspberry PI GPIO pins, all of which connect to the onboard sensors or function as independent outputs
8. **All-in-one board** includes all necessary sensors for learning hardware and software
9. **Self-developed software** for learning Scratch, Python, AI, and Minecraft step-by-step via an engaging dialogue teaching mode
10. **Offline account management** for saving learning progress and achievements and convenient for further study
1. 11.6 -inch 1920 * 1080 resolution screen
2. Microphone
3. Two-megapixel camera
4. 5V USB power supply port
5. DC 12V power supply port
6. Power switch
7. Screen brightness +/-
8. 3.5mm headphone jack
9. Removable wireless keyboard
10. Raspberry Pi power supply head (reserved)
11. HDMI connector
12. Raspberry Pi fixed position
13. Speakers
14. Storage groove
15. Cooling hole
16. Raspberry Pi network port
17. Raspberry Pi USB port
Development board

1. Joystick
2. Segment
3. Relay
4. Screen driver
5. Cooling fan
6. Raspberry Pi and PCBA connection switch
7. GPIO interface
8. GPIO indicate LED
9. DHT11 temperature and humidity sensor
10. Breadboard
11. Tilt sensor
12. LCD1602
13. PIR sensor
14. Sound sensor
15. IR sensor interface
16. I/O/ADC UART expansion interface
17. 9g servo interface
18. I2C expansion interface
19. Stepper motor interface
20. 4x4 button matrix
21. Buzzer
22. PIR sensitivity adjustment
23. Vibration motor
24. Sound sensor sensitivity adjustment
25. Touch sensor
26. 8x8 RGB matrix
27. RC522 RFID induction module
28. Light intensity sensor
29. LCD1602 brightness adjustment
30. Ultrasonic sensor
# The main parameters

## CrowPi2 Specification

<table>

Module list:

1. Joystick
2. Segment LED
3. Relay
4. Cooling fan
5. Switch converts connection between sensors and Raspberry Pi
6. GPIO pin socket
7. GPIO indicate LED
8. DHT11 temperature and humidity sensor
9. Breadboard
10. Tilt sensor
11. Hall sensor
12. PIR motion sensor
13. PIR sensitivity adjustment
14. Sound sensor
15. IR receiver
16. I/O/ADC/UART extension port
17. IIC port
18. 9G servo
19. Stepper motor
20. LCD1602 display
21. 4x4 button matrix
22. Buzzer
23. Vibration motor
24. Touch sensor
25. 8x8 RGB matrix
26. RC522 RFID sensing part
27. Moisture sensor
28. Light sensor
29. Ultrasonic sensor
30. Screen driver
31. Basic components pack
32. LCD1602 brightness adjustment
33. Sound sensor sensitivity adjustment

Conventional accessories:

Power supply x1  2.4G wireless mouse x1  Manual x1
Screwdriver x1  Stepper motor & Servo x1  RFID white card + tag x1
Infrared remote control x1  TF Card Reader x1  Crowtail -moisture sensor(with cable) x1
IR receiver x1  Motor + small fan x1  Components Pack x1
How to use

Install Raspberry Pi

1. Insert the SD card (built in system) into the Raspberry Pi SD card slot.

2. Push to the right to open the back cover of the Crowpi2 Raspberry Pi compartment.

3. Vertically install the Raspberry Pi 4 with the TF card inserted into the Raspberry Pi compartment.

4. Connect the Micro HDMI adapter board to the Micro HDMI interface of the Raspberry Pi.
5. Connect the Raspberry Pi power cable and the 2pin interface to the female socket on the PCBA board, and insert the Type-c into the Raspberry Pi type-c power port.

6. Remove the USB head and insert it into the USB port of the Raspberry Pi through the cable hole. It’s for camera and microphone.
7. Close the cover.

8. Connect the power supply, Use the 12V power supply in the accessories, insert the DC round head into the DC12V power supply port.

**Keyboard and mouse**

1. Remove the wireless receiver in the mouse compartment.

2. Insert any USB port of the Raspberry Pi.
3. Install a battery into the mouse, and then switch the button of keyboard and mouse to "ON" side.

4. Get started, and you can use **Fn+F1** to open/close the touchpad.

5. When the power led of keyboard is blink, it means that the power is almost exhausted, please use the micro usb cable to power the keyboard. And you can replace the battery of mouse if it runs out of power,

- **Storage compartment**

  Use your finger to open and close the storage compartment.
● Power bank

1. Install 5v power bank

1.1. Open the storage compartment, put the powerbank into the compartment, insert the wire through the wire hole, and then push it into device.

1.2. Access to 5V micro USB port.

2. Press the power button

● Screen brightness adjustment

Press the + button to increase the brightness, press - to decrease.
FAQ

1. Unable to boot
Make sure you are using the correct charger and that the SD card is inserted into the Raspberry Pi.

2. The module or sensor on the PCBA board cannot be used
Please make sure that GPIO toggle switch have been switched to A successfully.

3. The wireless keyboard cannot be used
Please ensure that the power is sufficient, and ensure that the wireless transmitter is plugged into the USB port of the Raspberry Pi.

4. The screen goes black and crashes
Please check whether the high-current peripheral is mounted to cause the insufficient power supply.

5. Camera and microphone do not work
Please check if USB is connected.

6. Unable to connect to the network
Please turn on the wireless network or connect to the Raspberry Pi Ethernet network port.

Precautions

⚠️ Do not use in humid environment
⚠️ Do not use an unsuitable power supply to power the device
⚠️ Do not approach heat sources
⚠️ Do not bend the keyboard and screen
Software

This is a software specially designed for Crowpi2 users, which integrates **scratch, python** programming and adaptation tutorials, **Micro:bit** and **Arduino IDE**, as well as the most popular programming game Minecraft.

In addition, it also can be used as entertainment device, which not only allows you to play small python games, but also enjoy videos and audios with a **built-in player**. Even if you want to learn the hottest AI related projects of recent years - **face and speech recognition**, we've provided some examples for you to get started.
Let users quickly master the knowledge of python programming and software and hardware interaction

Let users quickly master the knowledge of scratch programming and software and hardware interaction

20 small applications designed for quick familiarity with Crowpi2 hardware features

Use game Minecraft to open the door to python programming world for children, teaching in fun

Get the most popular knowledge of AI- face recognition and speech recognition

Built-in python programming client

Experience the fun of simple Mini Game written by python and develop your child’s brain

Makecode entry which is designed for Micro:bit programming

Built-in Scratch Visual Programming Client

Built-in Arduino programming IDE
Main page and User Settings

Main page

The page is the main software page, click on the corresponding module area to enter the corresponding section.

Click 🌈 to return to the desktop.

Click 🧑‍💻 to Create and login accounts.

Click 🔋 to pop up the shutdown window.

Click 🚪 shutdown the device or 🔄 to reboot.
Create and login accounts

Enter account login page, click  go back to the previous step.

The first time you use the software you need to register a new account.

Click Create Account to create a new user account. Then go to the page shown in the image below, click back to the previous step.

Enter Name, only support numbers and letters. Enter Password, limit the number of characters to 6-12 bits. Reconfirm the password entered in the second step, Click
Set up secret questions and answers, click **CREATE** to complete account creation.

Go back to the login page and enter the username and password you just set up.

Then click **LOGIN** to sign in.

Once you've successfully logged in, click on the user icon, pop up a personal user window, where you can view the progress of your course and your private folder. Click **LOGOUT** to log out of your account.
Forget password

If you forget your password, click **Forget Password?** on the login page to go to the password reset page, click back to the previous step.

Enter the secret question and answer, click **NEXT** to the next step, click back to previous step.

Enter the new password and confirm it twice, click **CREATE** complete password reset, go back to the login page and log in with the new password.
Operation Process

Learning
Integrated Scratch and python teaching resources, providing users with step-by-step tutorials to learn Scratch programming and python programming.

Projects
We provide 20 kinds of project use cases for users to quickly experience software and hardware interactions, understand the functions supported by the hardware that comes with the device.

Click on the icon to go to the projects selection page, as shows:

Attention
In the NFC music project, click **write** to write the number of music, then put the NFC card onto the NFC induction area, pick up the card after writing success. Next click **read**, then put then NFC card onto the induction area again.
Minecraft - the classic Minecraft raspbian version that combines gaming with programming.

Click on the icon and enter the desktop, pop up the Minecraft game window, the python programming client and the minecraft course teaching window. As shown in the figure below:

**Zone A**: Minecraft 16 course selection interface, click on the corresponding icon to enter the course, click back to the Dashboard page, click close the window.

**Zone B**: Minecraft Game Client.

**Zone C**: Python programming client, which can change game interactions by entering code according to the course guidance in zone A.
Drag the scroll bar on the right to browse and learn lessons.

Click back on the course selection page and click to close the window.

Enter AI Studies, divided into Face Recognition Speech and Recognition.

**Face recognition**: Seven face recognition courses allow you to master the simple principles of face recognition and simulate the application of preliminary scenes.

**Speech Recognition**: Five speech recognition courses, quickly master the setting of speech recognition wake-up words, call API, voice and hardware interaction and other content.
Click to enter speech recognition learning. Go back to the desktop and pop up the following two windows.

Zone A on the left is the Python programming client, and Zone B on the right is the speech recognition course selection window for a total of 5 lessons.

Click  back to the main page and click  to close the window.

Click on the corresponding course icon to access the course instruction page:

Drag the scroll bar on the right to browse and learning.

Click  to go back to the previous page, click  to close window.
Click to enter face recognition learning. Return to the desktop and pop up the following two windows.

Zone A on the left is the Python programming client, and the right Zone B is the Face Recognition Course Selection Window for a total of 7 lessons.
Click go back to the main page and click to close window.
Click on the corresponding course icon to access the course instruction page:

Drag the scroll bar on the right to browse and learning.
Click to go back to the previous page, click to close window.

Test camera

Learn how to use OpenCV to capture the video stream generated by the camera.
* Learn how the OpenCV reads the colors.
* Learn how to convert the frame into gray.
* Learn how to release camera resources and close the window opened by OpenCV.

Preparation
(1) CrowPi2 with OpenCV installed.
Python
Python programming - integrate the Python IDE for the convenience of Python developers
Click on the icon to return to the desktop and open the python programming client.

Game
Pygame-18 games written by python, users who is familiar with python can DIY games.

Micro:bit

Scratch
Scratch programming - integrated Scratch 3 software, learn to use visual programming.

Arduino
Arduino programming - a programming IDE designed for Arduino.
